

Common or Garden Project Prosiect Cyffredin ac Ardd

Have you seen these common species?

We are launching a **Common or Garden project** to record six common species that you may see in your gardens and around West Wales. Did you know that our common species are often our most under recorded species?

These six species are included in the Section 7 list of the Environment (Wales) Act 2016 which means they are of key significance to sustain and improve biodiversity in Wales. We need to know more about where these species are, can you help?

For more information and to take part visit our website:
<https://www.wwbic.org.uk/wildlife-recording/common-or-garden-sightings/>

We will be updating our Common or Garden species seasonally, so keep up to date with the latest information on

 facebook: @WestWalesBiodiversity

 Twitter: @wwbic1

and on our website.
